

- TACACS+
  - Terminal Access Controller Access - Control System Plus
    - Used for Authentication, Authorization, and Accounting(AAA)
      - Specifically for "Device Administration"
        - DA includes
          - Authenticating access to network devices
          - Providing central authorization of operations
          - Auditing of those operations
  - How is it different from RADIUS
    - Supports encryption
      - The specific encryption alg is not publicly disclosed
        - Hashes the Key with MD5 then XORs the hash value
    - Uses TCP instead of UDP
