

Cloud Components Demo

- vNet
 - acilearning-cloud-demo-vnet01
 - Explain Security as Network Function Virtualization
 - Network
 - Address space = 10.0.0.0/16
 - Default = Subnet01, 10.0.0.0/24
 - Subnet02 = 10.0.1.0/24
 - FirewallSubnet = 10.0.5.0/29 (3 IPs, 5 reserved)
 - Tagging
 - Chargeback and cost tracking
 - Show template in Visual Studio Code
-

laC episode,

- Show JSON template for Azure vNet in Visual Studio Code
 - Examine the JSON, observe the language tells the ARM what to provision.
 - SDN and SD-WAN are built to allow this programmatic control over the network infrastructure.
 - From a cloud standpoint this is a crucial element for automation and scalability, with consistent, repeatable results. Let the code do the repetitious work.
