

7-2-1: Examining Cloud Components

At the end of this episode, I will be able to:

1. Identify the significance of cloud components, given a scenario.

Learner Objective: *Identify the significance of cloud components, given a scenario.*

Description: In this episode, the learner will examine various cloud components such as Virtual Private Clouds (VPCs), Network Security Groups (NSGs), direct and VPN connections, cloud gateways, and more.

-
- What are VPCs?
 - o Virtual Private Networks (VPC) - provide networking and connectivity capabilities for virtual machines, products and services in the cloud.
 - o AWS and GCP - calls these Virtual Private Clouds or VPCs
 - o Azure - calls these Virtual Networks or vNets
 - o Oracle - calls these Virtual Cloud Networks
 - What are Network Security Groups> +
